

# SAS in the financial industry

By using SAS, banks and insurance companies will continue to be prepared for the ever-evolving demands of the financial world.

SAS is the market leader for business analytics software and the world's largest independent provider in the business intelligence market. For more than 40 years, SAS has been providing solutions for integrated business management that help customers increase their performance, design processes efficiently and at the same time act in a value-oriented manner. That's why 91 of the top 100 companies in the 2020 Fortune Global 500 rely on SAS.

In the financial industry, SAS provides a unified, enterprise-wide framework by seamlessly integrating data management and business analytics applications. In doing so, SAS simplifies data management processes and ensures improved data quality.

The successful use of SAS in the financial environment has already been proven in numerous use cases:

- ▶ Regulatory-compliant risk management functions (preparation of Basel III analyses/reporting, implementation of BCBS239 requirements)
- ▶ Automated test projects using SAS Enterprise Guide
- ▶ Validation of risk models
- ▶ Quality assurance
- ▶ Data evaluation (extensive collection of statistical routines)

Nagler & Company is a SAS consulting partner with many years of experience in the financial sector. We know the industry-specific requirements in detail and implement the software solutions in a targeted manner. Our team combines banking expertise with the necessary technical know-how, linking knowledge of processes and systems with the technical possibilities offered by SAS. In order to implement individual, result-oriented and efficient solutions based on SAS technology, we are at your disposal with all our project-proven expertise.
